

MicroStar contractor

Quick and easy microfibre cleaning - damp and dry

New product for 2010

Microfibre cloths

Traditional microfibre cloths are comprised of fibres with a fibre thickness of less than 1dtex(1g/10,000m) or 1 Denier (1g/9,000m).

The fineness of these fibres improve cleaning performance through:

- Capillary Action
- Larger surface area
- One wipe cleaning
- Reductions in chemical usage

Microfilament cloths

MicroStar contract is a next generation microfibre cloth manufactured from microfilaments measuring 0.15 dtex (over 6 times finer than existing microfibres). Microfilaments are created when bi-component fibres (2.4 dtex) are further split and entangled through high pressure water jets.

Benefits of microfilaments over microfibres

Microfilaments extend the existing advantages of microfibres to give:

- Increased cleaning performance due to dense construction and fine fibres
- A 400% increase in liquid absorption
- Extremely low levels of linting, passes clean room standards
- Isotropic construction, the cloth is uniform in all directions (no strong and weak direction)

Fast high performance cleaning

MicroStar micro offers faster high performance microfibre cleaning under a variety of cleaning conditions, providing improved performance in less time.

- High chemical resistance against chlorine, bleach, disinfectants, peroxide etc
- Damp & dry cleaning versatility
- Machine washable up to 500 times

Instructions for use

1. Fold approx. 20 MicroStar contract cloths (3 times) and stack them.
2. Pour cleaning or disinfecting solution (about 40 ml/cloth) in a 6-8 L bucket/box.
3. Take the stack and dip it sideways for 2-3 seconds in the solution.
4. Take the stack out and turn it 180°. Place it on the bottom of the bucket/box, let the rest of the solution soak into the cloths.
6. Use the cloth with the closed edge in the wiping direction by applying the 16 side technique. MicroStar contractor can also be prepared in a washing machine.
